PROFILE SUMMARY

Computing undergraduate at the University of Sri Jayewardenepura with hands-on experience authoring manual test cases across full-stack web platforms and building automation frameworks [Playwright (E2E), Postman/Newman (API), and an AI-powered QA agent using Playwright MCP + GitHub Copilot] running in CI/CD pipelines. Comfortable across the full testing stack: test design, defect reporting, requirements analysis, and AI-assisted automation. Currently seeking a QA / Test Automation internship.

TECHNICAL SKILLS

- **Automation & Testing:** Playwright, Postman, Newman, Page Object Model, Data-Driven Testing, REST API Testing, Schema Validation, Negative Testing, Security Testing (SQLi/XSS), Playwright MCP, GitHub Copilot, AI Agent Testing, LLM Tool Integration, Accessibility-Tree Automation, Model Context Protocol (MCP).
- **Languages & Markup:** Java, Kotlin, JavaScript, HTML, CSS, Python, Typescript
- **Tools & Platforms:** Jira, Postman, Microsoft Azure, Git/GitHub, Android Studio, Streamlit, Unity, NetLogo, Swagger/OpenAPI, REST API, Figma, Excel,Word, Draw.io, BPMN
- **Core Competencies:** Test Case Design & Execution, Requirements Analysis, Defect Tracking & Bug Reporting, User Acceptance Testing (UAT), Agile & Scrum, CI/CD

EDUCATION

Bachelor of Computing Honours in Information Systems **2023 - Present**
Faculty of Computing, University of Sri Jayewardenepura, Sri Lanka

G.C.E. Advanced Level Examination(Physical Science Stream) **2021/2022**
Central College, Anuradhapura

ACADEMIC PROJECTS

AI QA Agent - Playwright MCP + GitHub Copilot *Solo Project* AI QA Agent
- Built an AI-powered QA agent that reads natural-language requirements, explores live web applications via the Playwright Model Context Protocol (MCP) server, and generates executable Playwright tests using accessibility-tree snapshots instead of screenshots.
- Eliminated fragile CSS selectors by having the agent identify elements through semantic locators (getByRole, getByLabel) derived from real DOM inspection, improving test reliability across browsers and implemented origin allowlisting and manual tool-call approval as safety guardrails, treating the LLM as untrusted by default pattern aligned with OWASP guidance for AI agents.

Playwright E2E Framework *Solo Project* Playwright-e2e-framework
- Designed a Page Object Model framework with 14 test cases (42 executions across Chromium, Firefox, Mobile Chrome) covering login, inventory, cart, and checkout flows
- Implemented data-driven tests via JSON fixtures; used resilient locators (getByRole, getByPlaceholder) for accessibility-aligned selectors
- Configured GitHub Actions CI with browser caching; captures screenshots, videos, and Playwright traces on failure
- Generated HTML + JUnit reports for human and machine consumption.

API Test Suite (Postman + Newman) *Solo Project* Api-test-suite
- Built a 19-request / 34-assertion API test suite covering authentication, CRUD, and security edge cases against a public REST API
- Implemented chained requests auth tokens passed between endpoints via environment variables; separated dev/prod configs
- Added response-time assertions (<500ms on GETs), schema validation, and negative/security tests (SQLi, XSS, malformed JSON, unauthorized access)
- Ran in CI via Newman + GitHub Actions with rich HTML reports per collection

Univize *Group Project - as the QA Tester* *Univize*
- Authored and executed test cases across 11 application screens to verify functionality, usability, and bug-free

performance ahead of release.
- Collaborated with developers to log defects and confirm fixes, supporting a smoother and more reliable user experience.

UniCollab *Group Project* *UniCollab*
- Contributed to building a mobile task management application aimed at helping university students organise coursework, deadlines, and personal tasks in one place.

Sentiment Analyser *Group Project* *SentimentAnalyser*
- Integrated Reddit's API to collect real-world discussion data and applied AI-based sentiment analysis to extract and classify opinion trends.

Cancer Cell Tumor Growth Simulation *Individual Project* *Streamlit*
- Built a NetLogo simulation of tumor cell growth and exported behavioural data through BehaviorSpace for downstream analysis and trained a Random Forest classifier on the simulation data and deployed it as a live Streamlit app on Streamlit Community Cloud, completing the full pipeline from simulation to deployed model with no prior NetLogo or Streamlit experience.

Traffic Congestion & EV Charging Station Simulation *EV-Traffic*
- Extending NetLogo's Traffic Grid model with EV-specific logic, including charging stations, battery levels, and charging behaviour, to study how station placement affects congestion.
- Added configurable simulation parameters (EV percentage, number of charging stations, charging bays) ahead of training a predictive model on the simulation output and deploying it as a Streamlit app.

RESEARCH & PUBLICATIONS

Systematic Review of Ontology-Based Clinical Decision Support Systems for Breast Cancer Care
J'PURA Computing Symposium (JCoS) 2026 | Published & Presented

CERTIFICATIONS & TRAINING

Google Analytics Certification
Google

Web Design for Beginners
