Reference: UNI-142

BUG ID	SEVERITY	PRIORITY	STATUS
UNI-142	High	P1	Closed · Verified

Summary

App crashes when attaching an image larger than 5 MB to a new post

Environment

Device	Pixel 6 (Android 14)	App Version	1.3.2 (Build 245)
Network	Wi-Fi 4G	Account	student.test@univize.app
Component	Feed / Post Creation	Type	Functional

Classification

Severity: High Priority: P1

Description

When a user attaches an image larger than 5 MB to a new post, the app freezes on the preview screen and crashes after approximately 4 seconds.

Steps to Reproduce

- Log in with a valid student account
 - Tap the "+" floating action button on Home
 - Tap the image icon → select a photo > 5 MB from gallery
 - Observe the preview screen

Expected Result

Image preview loads, user can crop and confirm, then publish successfully.

Actual Result

Spinner appears, screen becomes unresponsive, and the app crashes. Logcat shows:

```
java.lang.OutOfMemoryError
```

Reproducibility

3 / 3 attempts — 100% reproducible

Impact

Users cannot publish image posts with high-resolution photos — a core feature of the platform. This defect blocks UAT sign-off for the Feed module.

Attachments

- screen-record-crash.mp4 — capture of the crash
- logcat-oom-error.txt — full logcat output
- screenshot-preview-freeze.png — frozen preview screen

Suggested Fix (optional)

Downscale the image client-side before upload (e.g., max 1920px, compress to < 1 MB), OR stream the upload to avoid loading the full bitmap into memory.

Lifecycle & Ownership

Reported By	Tharushi Gandarawaththa	Assigned To	Dev — Android Team
Fix Version	1.3.3 (Build 251)	Status	Closed — Verified
