

Test Plan

Univize — University Social Ecosystem

THARUSHI GANDARAWATHTHA

QA Engineer · Academic Project
Version 1.0

DOCUMENT	PROJECT	STANDARD	DATE
Test Plan	Univize	IEEE 829	2026

1. Introduction

This Test Plan describes the testing strategy, scope, resources, and schedule for the Univize mobile application — a university-centric social ecosystem enabling students to share resources, post updates, and connect within their faculty. This plan follows IEEE 829 structure and Agile testing practices.

2. Objectives

- Verify all 11 application screens behave per acceptance criteria
- Validate CRUD operations for posts, comments, and user profiles
- Ensure authentication and session handling are secure
- Confirm UI consistency across Android devices
- Log and track all defects to closure

3. Scope

IN SCOPE

- Login / Sign-up / Forgot Password
- User profile (view, edit, avatar upload)
- Feed (create, view, like, comment, delete post)
- Faculty groups and resource sharing
- Search and filter functionality
- Navigation across all 11 screens

OUT OF SCOPE

- Backend infrastructure load testing
- Third-party payment integration (not part of MVP)
- Localization / multi-language support

4. Test Strategy

TEST LEVEL	APPROACH
Unit Testing	Covered by developers (JUnit)
Integration	Manual — API response validation via Postman

TEST LEVEL	APPROACH
System Testing	Manual — end-to-end user flows
Regression	Manual + selective automation (Playwright)
UAT	Peer-reviewed with 3 test student accounts

TEST TYPES

- **Functional Testing** — 100% of documented requirements
- **UI / Usability Testing** — Cross-device consistency
- **Negative Testing** — Invalid inputs, empty states, network loss
- **Compatibility Testing** — Android 10, 12, 14
- **Smoke Testing** — Before every build handoff

5. Entry Criteria

- Requirements and wireframes signed off
- Test build deployed to staging
- Test cases reviewed and approved
- Test accounts and sample data ready

6. Exit Criteria

- 100% of planned test cases executed
- Zero Critical / High severity defects open
- ≤ 3 Medium severity defects open (with workarounds)
- All logged defects verified and closed
- Test Summary Report signed off

7. Test Environment

COMPONENT	DETAILS
Devices	Pixel 6 (Android 14), Samsung A52 (Android 12)
Emulator	Android Studio — Pixel 4 API 30
Tools	Jira (defects), Postman (API), Figma (design ref)
Test Data	Seeded via Firebase Console

8. Defect Management

SEVERITY LEVELS

LEVEL	DEFINITION
Critical	App crash, data loss, blocker
High	Major feature broken, no workaround
Medium	Feature works with minor issue
Low	Cosmetic / typo

New → Assigned → In Progress → Fixed → Retest → Closed / Reopened

9. Risks & Mitigation

RISK	MITIGATION
Frequent UI changes mid-sprint	Re-run smoke tests per build
Limited device coverage	Use emulator for edge Android versions
Tight timeline	Prioritize Critical/High test cases first
Flaky network on test device	Use recorded mock API responses

10. Schedule

WEEK	ACTIVITY
Week 1	Requirement analysis, test case design
Week 2	Test execution (functional), defect logging
Week 3	Regression, retesting fixes, UAT
Week 4	Test Summary Report, handoff

11. Deliverables

- This Test Plan
- Test Case Suite (see companion document)
- Defect Log (Jira export)
- Test Summary Report
