PROFILE SUMMARY

Detail-oriented Computer Science undergraduate with hands-on experience in Quality Assurance, test case design, and requirements validation. Proven ability to translate complex system behaviors into actionable test scripts and user stories. Experienced in collaborating with development teams to ensure bug-free releases and aligning technical outputs with user needs. Seeking an internship in QA or Business Analysis to leverage strong analytical and problem-solving skills.

TECHNICAL SKILLS

- **Programming Languages:** Python, Java, Kotlin, JavaScript, HTML, CSS
- **QA & Testing:** Test Case Design & Execution, Bug Identification & Reporting, User Acceptance Testing (UAT), Manual Testing, Defect Tracking
- **Requirements and Modelling:** Requirement Analysis, BPMN, Draw.io, Figma, User Story Mapping
- **Tools & Platforms:** Jira, Postman, Swagger/OpenAPI, REST API, Git/GitHub, Microsoft Azure, Android Studio, Streamlit
- **Simulation & AI:** NetLogo, Multi-agent Systems, Applied Machine Learning (Random Forest, Scikit-learn)
- **Methodologies:** Agile & Scrum (Basic Knowledge), Design Science Research
- **General:** Excel, Word, Documentation, Collaboration

EDUCATION

Bachelor of Computing Honours in Information Systems

Faculty of Computing, University of Sri Jayewardenepura, Sri Lanka

2023 - Present

G.C.E. Advanced Level Examination(Physical Science Stream)

Central College, Anuradhapura

2021/2022

ACADEMIC PROJECTS

Univize Group Project

Social Media Platform for University Students — QA Tester

[Univize](#)

- Authored and executed test cases across 11 application screens to verify functionality, usability, and bug-free performance ahead of release.
- Collaborated with developers to log defects and confirm fixes, supporting a smoother and more reliable user experience.
- Analyzed functional requirements to ensure alignment with user stories and acceptance criteria.

UniCollab

Task Manager Mobile App for University Students

[UniCollab](#)

- Contributed to building a mobile task management application aimed at helping university students organise coursework, deadlines, and personal tasks in one place.
- Participated in requirement gathering and feature prioritisation to match student workflow needs.

Sentiment Analyser

Reddit API & AI-Based Sentiment Analysis Tool

[SentimentAnalyser](#)

- Integrated Reddit's API to collect real-world discussion data and applied AI-based sentiment analysis to extract and classify opinion trends.
- Processed unstructured textual data to derive actionable insights on public sentiment.

Cancer Cell Tumor Growth Simulation *Individual Project*

[Tumor Growth Predictor](#)

Complex Systems & Agent Technology — NetLogo, Random Forest, and Streamlit

- Built a NetLogo simulation of tumor cell growth and exported behavioural data through BehaviorSpace for downstream analysis.
- Trained a Random Forest classifier on the simulation data and deployed it as a live Streamlit app on Streamlit Community Cloud.
- Completed the full pipeline from simulation to deployed model with no prior NetLogo or Streamlit experience.

Traffic Congestion & EV Charging Station Simulation *Group Project*

[EV Traffic Grid Predictor](#)

Complex Systems & Agent Technology — NetLogo, ML, and Streamlit

- Extended NetLogo's Traffic Grid with EV-specific logic (charging stations, battery levels, charging behaviour).
- Configured simulation parameters and trained a predictive model on the output. Successfully deployed the model as a live, interactive Streamlit app.

Breast Cancer Clinical Decision Support System (Ontology-Based) *Ongoing*

Final Research Project

- Designing a context-aware clinical guidance and care navigation model for early breast cancer detection and referral support, tailored to the Sri Lankan healthcare context.
- Applying Design Science Research methodology across systematic review, ontology development (symptoms, risk factors, referral pathways), CDSS design, prototype implementation, and evaluation stages.
